

## Looking to add Laser to your practice?

### Attention Electrologists with Laser State Approval

E.I.N.E. has added Class IV Laser Hair Removal and IPL (Intense Pulse Light) to the existing modalities of Electrolysis, Thermolysis and Blend. This was added to our 1100 Hour Electrology Hair Removal Program. State testing in Massachusetts will now include Laser.

E.I.N.E. owns the latest in laser and IPL units. This enables us to have very flexible schedules for licensed electrologists who wish to become laser certified.

### 30 Hour Laser Course

Tuition: \$1850.

- Theory hours are held on Monday & Friday
- Clinical hours are held Monday through Thursday
- We do not offer more than 8 hours per session. We consider any more than this draining. We want our students to get the most from their experience. It is a serious discipline and fresh eyes are necessary.
- Massachusetts licensees obtain 7 contact CEU credits towards license renewal!

### Benefits that distinguish us:

- School provides clients for all trainees. History cards and previous treatment tracking, including settings used, number of treatments performed, etc...this is a valuable asset for training.
- ANSI equipped clinic work areas with proper ventilation, air cleaners, medical wiring and safety glasses. E.I.N.E. both teaches and practices ANSI requirements.
- Excellent instructors with many years of experience
- Ability to have flexible schedules that work for you
- Light lunch is also included
